

CASE STUDY

Full-scale cybersecurity
solution for manufacturing

Company Industry

Manufacturing

Location

East Coast, USA

Company Type

Privately Held

Number of Employees

130

Annual Revenue

\$58M

THE SITUATION

Complete cybersecurity guidance & solutions

The manufacturing industry has been a prime target for cyber attacks. With a high digital footprint and limited cybersecurity resources, manufacturing companies are faced with disruption of business continuity and downtime expenses in the face of a cyber attack.

As a supply chain provider to multiple government and commercial entities, the customer needed a partner to enable them to meet Cybersecurity Maturity Model Certification (CMMC) to increase trust and reduce their risk of a cyber attack that could affect their bottom line.

With limited knowledge about complex cybersecurity and compliance requirements, and limited internal staff to achieve these objectives, the customer looked to a holistic outsourced solution with the experience to help them define their current security posture, where they needed to be to become compliant, and a clear plan of action to get there.

THE SOLUTIONS

Foresite provided a comprehensive solution that allowed the customer to outsource with a single platform to incorporate all levels of ongoing cybersecurity and compliance monitoring.
